CANADA'S PROGRESS ON 90-90-90 TARGETS

Canada has committed to meet global targets for HIV testing and treatment by 2020.

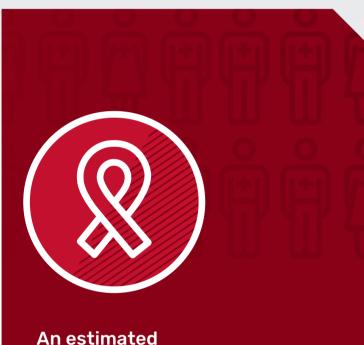

90% of people living with HIV diagnosed

90% of people diagnosed starting treatment

90% of people on treatment achieving viral suppression

CATIE.CA

It is projected that meeting these targets will end AIDS as a public health threat by 2030. This was the state of our progress at the end of 2018:

62,050

CANADIANS ARE LIVING WITH HIV.

New HIV infections have increased slightly in Canada over the past several years.

TARGET: 90% of those living with HIV

PROGRESS: 87%

An estimated

53,750

HAVE BEEN DIAGNOSED.1

People living with HIV have a lower risk of illness and death if they are diagnosed early.2

TARGET: 90% of those diagnosed

PROGRESS: 85%

An estimated

45,910

HAVE STARTED TREATMENT.

With prompt and effective treatment, HIV-positive people in Canada have life expectancies similar to their HIV-negative peers.³

TARGET: 90% of those on treatment

PROGRESS: 94%

An estimated

43,350

HAVE ACHIEVED VIRAL SUPPRESSION.

Maintaining an undetectable viral load through treatment and care prevents the sexual transmission of HIV.4
